SUBJECT: Lab Audits for the Pagel Pit, Illinois Site

FROM: Dennis Wesolowski, Chief, LSSS *DW*

TO: Bernard Schorle, RPM, Il/In Remedial Response Section #2

Based on the revised information received from you on May 28 concerning Warzyn's use of their lab for field screening for volatiles, there will be no need for a lab audit. My original determination for an audit was predicated on information given me showing low level VOC analysis would be done by a fixed lab analytical method.

As I indicated before the other lab you requested information about does not need to be audited for the work in question. If there are any questions about this matter, please call me at 6-1970.
